Definition 1.1 (javascript). *Javascript is an object-oriented and dynamically typed scripting language used to make webpages interactive.*

Remark 1.2.

- *Always write a semicolon after a statement.*
- *Variables should always be declared before they are used.*

Definition 1.3 (declaration).

- `var`
- `let` : *block-scoped*
- `const` : *block-scoped, must be initialized*

Example 1.4 (var scope).

```
console.log(x === undefined); // true
var x = 3;
(function () {
  console.log(x); // undefined
  var x = "local value";
})();
```

Definition 1.5 (types).

- `Boolean` : *true or false*
- `null`
- `Number` : *integer or floating point number*
- `String`

Definition 1.6 (type conversion).

- $num \rightarrow string$: `"a is " + 10 // "a is 10"`
- $string \rightarrow num$: `parseInt("10.1")`
