1 Introduction **1**

1 Introduction

`https://developer.mozilla.org/en-US/docs/Web/JavaScript/Guide/`

Definition 1.1 (javascript)**.** *Javascript is an object-oriented and dynamically typed scripting language used to make webpages interactive.*

- Always write a semicolon after a statement.
- Variables should always be declared before they are used.

Definition 1.2 (declaration)**.**

- `var`
- `let` *: block-scoped*
- `const` *: block-scoped, must be initialized*

Example 1.1 (var scope)**.**

```
console.log(x === undefined); // true
var x = 3;
(function () {
    console.log(x); // undefined
    var x = "local value";
})();
```

Definition 1.3 (types)**.**

- `Boolean` *: true or false*
- `null`
- `Number` *: integer or floating point number*
- `String`

Definition 1.4 (type conversion)**.**

- *num* $\rightarrow$ *string :* `"a is " + 10 // "a is 10"`
- *string* $\rightarrow$ *num :* `parseInt("10.1")`
